EFFECTIVE DATE: DECEMBER 16, 2015

Federal Emergency Management Agency

FLOOD INSURANCE STUDY NUMBER
53015CV003A
NOTICE TO
FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study (FIS) report may not contain all data available within the Community Map Repository. Please contact the Community Map Repository for any additional data.

The Federal Emergency Management Agency (FEMA) may revise and republish part or all of this FIS report at any time. In addition, FEMA may revise part of this FIS report by the Letter of Map Revision process, which does not involve republication or redistribution of the FIS report. Therefore, users should consult with community officials and check the Community Map Repository to obtain the most current FIS report components.

Selected Flood Insurance Rate Map (FIRM) panels for this community contain information that was previously shown separately on the corresponding Flood Boundary and Floodway Map (FBFM) panels (e.g., floodways, cross sections). In addition, former flood hazard zone designations have been changed as follows:

<table>
<thead>
<tr>
<th>Old Zone(s)</th>
<th>New Zone</th>
</tr>
</thead>
<tbody>
<tr>
<td>Al through A30</td>
<td>AE</td>
</tr>
<tr>
<td>B</td>
<td>X</td>
</tr>
<tr>
<td>C</td>
<td>X</td>
</tr>
</tbody>
</table>

Initial Countywide FIS Effective Date: December 16, 2015
TABLE OF CONTENTS – Volume 1 – December 16, 2015

1.0 INTRODUCTION ......................................................................................................................... 1
  1.1 Purpose of Study ......................................................................................................................... 1
  1.2 Authority and Acknowledgments ................................................................................................. 1
  1.3 Coordination ................................................................................................................................. 4

2.0 AREA STUDIED .......................................................................................................................... 5
  2.1 Scope of Study ............................................................................................................................... 5
  2.2 Community Description ............................................................................................................... 9
  2.3 Principal Flood Problems ........................................................................................................... 12
  2.4 Flood Protection Measures ......................................................................................................... 17

3.0 ENGINEERING METHODS ...................................................................................................... 19
  3.1 Hydrologic Analyses .................................................................................................................. 20
  3.2 Hydraulic Analyses ..................................................................................................................... 25
  3.3 Vertical Datum ............................................................................................................................ 30

4.0 FLOODPLAIN MANAGEMENT APPLICATIONS ........................................................................ 32
  4.1 Floodplain Boundaries ................................................................................................................. 32
  4.2 Floodways .................................................................................................................................. 35
